

VELoop Rewards 90-Day SEO Roadmap & Growth Strategy

Project	VELoop Rewards — Organic Search Growth Project
Synthesizes	Files 1–10 (Audit, Keywords, Competitors, Content Gap, Calendar, On-Page, Linking, Technical, Articles, Link Building)
Includes	The 90-Day Roadmap, KPI Framework, Reporting Template, and the Final Challenge strategy (brief Section 50)
Date	18 September 2026

1. How the Ten Files Feed This Roadmap

Nothing in this document is new research — it's the sequencing layer that turns Files 1–10 into an actual 90-day plan of work. Three findings, repeated across multiple earlier files, shape every decision below:

- **Zero search visibility and zero backlinks** (File 1, Section 3; File 3, Section 1) — the roadmap has to start with indexability and trust, not content volume.
- **Nine of ten audited pages have no confirmed public version** (File 6) — building pages is as much a Month 1 task as writing content.
- **Every competitor's biggest asset is third-party trust content** (File 3, Section 1) — which VELoop has none of, making trust content the highest-leverage early investment.

File	What It Contributes to This Roadmap
1 — SEO Audit	Defines every Month 1 technical fix (Section 2 below)
2 — Keyword Research	Supplies the keyword targets behind every article and page
3 — Competitor Analysis	Sets realistic 90-day expectations against Freecash/Swagbucks/Toluna/JumpTask

4 — Content Gap Report	Determines which topics are built first
5 — 3-Month Content Calendar	Supplies the exact article schedule referenced in Section 2
6 — On-Page Recommendations	Defines the page-build checklist for Month 1
7 — Internal Linking Plan	Defines how new content connects to conversion once published
8 — Technical SEO Report	Supplies the Critical/High fix sequence for Month 1, Step 1
9 — Four Complete Articles	The actual Month 1 content ready to publish
10 — Link Building Strategy	Defines Month 2–3 outreach, sequenced after trust content is live

2. The 90-Day Roadmap

MONTH 1
FOUNDATION

MONTH 2
CONTENT GROWTH

MONTH 3
AUTHORITY & OPTIMISATION

Month 1 — Foundation

- Verify robots.txt, sitemap.xml, and rendered homepage content (File 8, Section 2 — Critical)
- Fix meta robots/canonical tags site-wide (File 8, Section 3)
- Request Search Console access at Restricted/Full role; confirm real indexation status (File 1, Section 3; File 8, Section 5)
- Build confirmed-missing public pages: Refer & Earn, Games/Tasks hub, Daily Rewards, How It Works, FAQ (File 6)
- Build /blog index with category structure (File 6; brief Section 14)
- Publish all four Month 1 articles from File 9: Legitimacy, VEs Explained, Pillar Guide, Withdrawals
- Implement internal linking for the Trust/Pillar funnel (File 7)
- Submit Product Hunt launch and set up a Qwoted source profile (File 10)

Month 2 — Content Growth

- Publish Month 2 articles from File 5: Referral, Watch Ads, Tasks, Daily Rewards guides

- Build remaining feature landing pages (Spin & Win, Games, Tasks — File 6)
- Implement Feature-Funnel internal linking for all Month 2 articles (File 7)
- Begin student-publication and GPT-review-site outreach (File 10)
- Respond to relevant journalist queries via Qwoted (File 10)
- Run first full technical crawl (Screaming Frog) and PageSpeed Insights pass; fix Medium-priority items (File 8, Section 4)
- Pull first real Search Console data (queries, impressions, indexed pages) and compare against File 2's keyword map

Month 3 — Authority & Optimisation

- Publish Month 3 articles from File 5: SVEs Explained, Spin & Win, India Comparison, Students guide
- Begin creator/podcast interviews and complementary-app partnership outreach (File 10)
- Request inclusion on curated 'best rewards apps' resource pages, now that trust content exists (File 10)
- Update/expand any Month 1–2 article showing early ranking movement in Search Console
- Re-run the competitor comparison (File 3 methodology) to check what's changed
- Compile the first full monthly report using the template in Section 4
- Identify which 2–3 topics to double down on for Month 4+ based on real performance data

3. SEO KPI Framework

Per brief Section 40, success here is not “publish 50 articles.” It’s measurable movement on the metrics below, tracked from a real, disclosed zero baseline (File 1, Section 3).

Primary KPIs

KPI	Baseline	What to Watch For
Organic clicks	0 (File 1)	Any consistent upward trend from Month 1 onward, even small, is the real early signal.
Organic impressions	0 (File 1)	Should move before clicks do — impressions rising with flat clicks points to a title/meta problem (File 6).
Relevant ranking keywords	0 confirmed	Track against the exact keyword map in File 2, not just any ranking keyword.
Organic registrations	Unknown — requires Analytics	The ultimate business metric; request Analytics access once available (brief Section 48).
Organic conversion rate	Unknown — requires Analytics	Watch whether trust content (File 9) measurably improves this over time.

Secondary KPIs

KPI	Baseline	What to Watch For
CTR	Unknown — requires Search Console	Low CTR with reasonable position often means the title/meta needs work (File 6), not the content.
Indexed pages	0 confirmed (File 1)	Should climb in step with the Month 1 page-build checklist above.
Referring domains	0 (File 3)	Track against the 10 opportunities in File 10 — even 2–3 earned links in 90 days is a real result from zero.
Engaged organic sessions	Unknown — requires Analytics	A better content-quality signal than raw session count alone.

4. Monthly Reporting Template

A reusable template (brief Section 41) — copy this structure each month rather than starting from scratch.

Section	What Goes Here
Organic Traffic	Total organic sessions this month vs. last month
Search Impressions	From Search Console, vs. last month

Clicks	From Search Console, vs. last month
CTR	Site-wide and for the top 5 queries
Ranking Keywords	New keywords appearing in the top 100 vs. File 2's target list
New Content	Articles/pages published this month, from File 5's calendar
Updated Content	Any existing article refreshed, and why
Backlinks	New referring domains earned, mapped to File 10's opportunity list
Technical Issues	New issues found, or File 8 items resolved this month
Conversions	Organic registrations this month, once Analytics access exists
Wins	2–3 specific, evidence-based wins — not vague statements
Problems	Anything that underperformed, stated plainly
Next Month's Plan	What changes based on this month's data

5.Final Challenge — SEO Growth Strategy

“If VELoop Rewards gives me zero advertising budget for the next 3 months, what SEO strategy would I execute to bring the highest-quality organic users to the platform?”

1 What I would prioritise first

Indexability, not content. Files 1 and 8 both point to the same risk: if the homepage isn't reliably crawlable and the site isn't confirmed indexed, no amount of new content or backlinks can have any effect. I'd spend the first two weeks confirming robots.txt, sitemap, rendered content, and Search Console status before publishing a single new page.

2 Which keywords I would target

The Category E “platform-specific” terms from File 2 first — “what is VEs,” “what is SVEs” — because they're the only keywords in this entire project with zero competition. Then trust-intent keywords (“is VELoop Rewards legit”), since File 3 showed every competitor wins on trust content, not feature content.

3 Which pages I would build

The nine pages flagged “not confirmed to exist” in File 6, in this order: How It Works (trust), FAQ, blog index, then the four feature pages with the strongest keyword match (Refer & Earn, Watch Ads, Tasks, Daily Rewards).

4 Which articles I would publish

Exactly the four in File 9, in Month 1 — Legitimacy, VEs Explained, the Pillar Guide, and Withdrawals — because they close File 4's highest-priority gaps and give the internal linking plan (File 7) somewhere real to point.

5 Which competitors I would strategically target

Not Swagbucks — its ~1.89M-backlink moat (File 3) isn't a realistic 90-day fight. I'd target the gap Toluna leaves open: none of the four competitors clearly own the India-student audience (File 3, Section 4.2), which is VELoop's most winnable angle given its .in domain.

6 How I would build authority

Earned, not bought — exactly the File 10 sequence: Product Hunt and Qwoted first (zero-cost, reputation-neutral), student publications second, then creator interviews and resource-page inclusion once there's enough trust content to make those pitches credible.

7 How I would convert organic visitors into registrations

By following the funnel in File 7 without exception: every blog article resolves to a feature page or trust page, and every feature/trust page resolves to registration with a specific, honest CTA — never a dead-end article.

8 What I would measure

The Primary KPIs in Section 3 above, checked against the real zero baseline from File 1 — impressions and indexed-page count first (since those move before clicks or conversions can), then organic clicks and ranking keywords by Month 2.

9 What I would stop doing

Publishing feature-explainer content with no trust content around it. File 3 showed this is exactly what leaves competitors' users skeptical, and it's the mistake this roadmap is structured to avoid by putting trust content first, not last.

10 What I expect to achieve, and why

Not top rankings for competitive head terms — that's not realistic against Swagbucks' backlink profile in 90 days, and this document won't claim otherwise (brief Section 45). What's realistic: confirmed indexation, a handful of ranked platform-specific and trust keywords with zero competition, 2–3 earned backlinks, and a working conversion funnel ready to compound once Month 4+ content builds on it.

6. Closing Note

This roadmap, and the ten files behind it, are built to be handed to a founder, an SEO lead, and a developer and actually acted on — not filed away. Every recommendation traces back to something directly observed (File 1's live site check, File 3's competitor research) rather than assumed, and every claim about VELoop's own product is flagged for confirmation where it couldn't be independently verified (File 9, Article 4 in particular).

No part of this project claims VELoop will rank #1 for anything. What it claims, in line with brief Section 45, is that this strategy is designed to improve VELoop's organic search visibility and increase its opportunities to attract relevant search traffic — starting from an honestly disclosed zero.
